Lift Ready's attached charging arm makes winding the spring easy and safe.

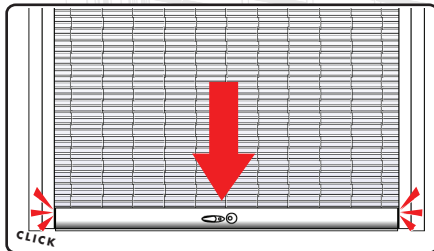

Lift Ready's exclusive extruded aluminum telescoping support tubes make loading, unloading and installing a lighter and easier task.

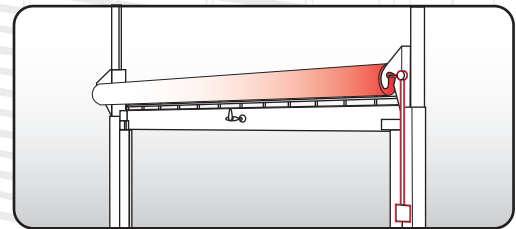

Lift Ready 15" front loading bracket plates allow for quick drop-in barrel installation and level adjustment.

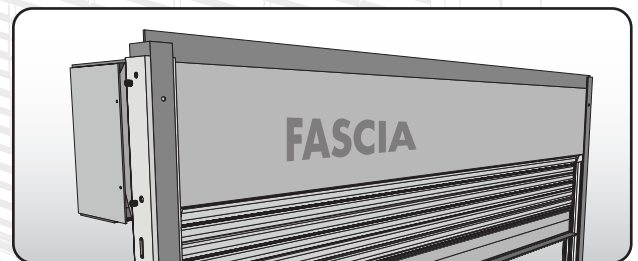

Lift Ready curtains are pre-wrapped on an extruded aluminum barrel simplifying the job on site.

Lift Ready's exclusive Smart-Lock System allows end-users to engage the lock at a convenient height and then close the grille to the floor where the grille locks automatically.

Motors for Lift Ready grilles are factory installed in the barrel and do not require side, top or front of coil room.

Optional hood to cover top, front, and bottom of coil assembly. Solid aluminum end covers provide finished appearance. Optional fascia attaches to hood to cover back of coil assembly. Available in 26 Ga. steel, or 23 Ga. aluminum. (If the Back of plate to Back of plate measurement is more than 10'0", a multiple piece hood is required.)
